

TasNetworks is committed to safely delivering electricity and telecommunication network services, creating value for our customers, our owners and our communities in which we work. Our vision is to be trusted by our customers to deliver today and create a better tomorrow.

To support our vision and commitment to the protection of the environment, we play an active role in the promotion of environmental and cultural heritage values. We seek to embed environmentally sustainable practices across our entire business and align with the United Nations Sustainable Development Goals.

Our Environment and Sustainability Goal is to minimise the impact of our activities on the environment and cultural heritage. To achieve this, we commit to work together to:

- proactively identify and manage environmental and cultural heritage risks throughout the life cycle of our assets and activities.
- ensure our systems and processes enable compliance with applicable statutory obligations, standards, codes of practices and other regulatory requirements.
- set and regularly review objectives and targets which drive improved environmental performance and maturity.
- ensure our team members are adequately aware, consulted, trained and competent to meet the requirements of this policy and the Integrated Management System.
- empower our people to make responsible choices and to prevent, intervene or stop activities with the potential to have adverse environmental or cultural heritage impacts, until effective controls are in place.
- monitor, review and report our environmental performance and adjust our systems and processes accordingly to ensure continuous improvement.
- strive to be environmentally sustainable by seeking out, identifying and implementing opportunities that create value by integrating sustainability principles into our activities over the entire life cycle.
